

Press Release: Paradise Aircraft

### Light Sport Insurance Program

Paradise Aircraft has partnered with Travers & Associates, an aviation insurance brokerage established in 1950. Travers is offering favorable terms for Paradise Aircraft based in the USA.

"Paradise aircraft are one of the most insurable Light Sport Aircraft in the world. The outstanding safety record, parts availability, and docile nature of Paradise aircraft also make them one of the least expensive Light Sport Aircraft in the industry to insure," said Chris Travers, sales manager for Travers & Associates.

Insurance underwriters are impressed with the extremely slow stall speed and stable nature of the aircraft. The pilot and passenger are well protected by the welded steel tube structure of the fuselage. The sturdy landing gear will help prevent insurance claims in the event of a hard landing.

Paradise Aircraft has been designing and building aircraft for decades. They are far from a start up Light Sport Aircraft manufacturer. The long time safety record of the airframe, and the standard 100 HP Rotax which is reliable, proven, and virtually indestructible make the aircraft one of the least expensive and most insurable Light Sport Aircraft in production.

"It's important that your aviation insurance program be aligned with your specific flying category and needs. We quote insurance rates based on the value of the plane, the pilot's experience, and the risk factors. Because Paradise Aircraft are typically safe and reasonably priced, insurance rates for Paradise Aircraft tend to be very affordable. We can work with sport pilots to put together a comprehensive program based on their experience and how often they fly," said Chris Travers.

Sport aircraft represent a huge area of growth for the aviation industry, allowing many more individuals to take part in the thrill and enjoyment of flying. Obviously, maintaining safety in the skies and safety of pilots is at the forefront of this burgeoning segment. Travers and Associates is an expert in sport aircraft insurance. Their extensive network in the industry allows their aviation insurance specialists to develop plans that meet a sport aircraft pilot's needs without being prohibitively expensive.
